A Source Book for the Economic Geography of North America

By **CHARLES C. COLBY**

Assistant Professor of Geography, the University of Chicago

The fundamental idea of the book is to make available to the busy teacher the material on this subject which is scattered widely through literature. The course which has been given for a number of years at the University of Chicago has resulted in the collection and organization of the material most suitable for the purpose.

The book contains short magazine articles and materials from Canadian, Mexican, and United States government publications. The selection of the material has been governed by the concept that there is a direct relation between the environment and the economic activities of the region. The author aims to survey the different sections of the country from the viewpoint of industrial opportunity.

The Geography of Illinois

By **DOUGLAS C. RIDGLEY**

Professor of Geography in the Illinois State Normal University

The author's aim is to provide an authoritative study of the state, presenting in compact form the wide range of physical influences which make up the geographic environment in which men live.

The natural features and natural resources of the state are treated in some detail. The great occupations of mankind—agriculture, mining, manufacturing, transportation, and trade—are discussed with sufficient fulness to give an adequate idea of their development and present importance within the state. The population census of 1920 for Illinois is treated in a final chapter. The book is designed to be of interest to the busy citizen who wishes to know his state as a unit in its present-day activities; to teachers and pupils who would know Illinois well enough to interpret other regions in comparison with the home state; to all who wish to learn the reasons for the high rank of Illinois in many lines of human endeavor.
